An objective of this research study is to address the need for measuring innovation within the context of a defense organization. In addition, the research presents a new model for measuring innovation within the examined environment, using both quantitative and qualitative measures. The research uses a case study research methodology as a means to present how innovation is actually measured within the examined environment and a number of data collection instruments that include questionnaires and interviews to gather quantitative and qualitative data. The study identified items that could be used to properly manage innovation within the context of defense organizations. The proposed model for innovation measurement proved to be more effective in managing and measuring innovation within the context of the examined environment.

Major: Industrial Engineering

Educational Career:
Bachelor's of Avionics Engineering, BS, 4, Embry-Riddle Aeronautical University
Master's of Computer Science, MS, 2, Webster University

Committee in Charge:
Dr. Ahmad Elshennawy, Chair, IEMS
Luis C. Rabelo, IEMS
Gene C. Lee, IEMS
Waldemar Karwowski, IEMS
Nizam Uddin, Statistics

Approved for distribution by Dr. Ahmad Elshennawy, Committee Chair, on February 7, 2013.

The public is welcome to attend.
