Announcing the Final Examination of Casey Perkowski for the degree of Master of Science

Time & Location: July 7, 2017 at 10:00 AM in ENGR 2 202
Title: TENSILE-COMPRESSIVE ASYMMETRY AND ANISOTROPY OF FUSED DEPOSITION MODELING PLA UNDER MONOTONIC CONDITIONS

Additive Manufacturing (AM) continues to gain popularity for its ability to produce complexly-shaped final use components that are impractical to manufacture by traditional methods; however, additive manufactured parts contain complex mesostructures that result in directionally-dependent mechanical properties that have yet to be fully characterized. This effort demonstrates a framework of experimental and analytical methods needed to characterize the uniaxial monotonic behavior of fused deposition modeling PLA using tensile and compressive experiments on specimens printed at various orientations. Based on experimental results, the asymmetry and anisotropy of tensile and compressive response were analyzed for a candidate material. Specimens from different orientations underwent microscopy and failure surface analysis to correlate test data. The material was observed to exhibit tetragonal behavior with tensile-compressive asymmetry. To help validate the model, a component-level study was performed. A newly-developed square donut (i.e., prismatic torus) was printed in multiple orientations, tested, and compared to simulations. The experimental and simulated results show a strong correlation. Based on the collection of results, analysis, and computations, this work demonstrates a practice that can be used to characterize similar materials for use in components.

Major: Mechanical Engineering

Educational Career:
Bachelor's of Mechanical engineering, BS, 2015, University of central florida

Committee in Charge:
Ali Gordon, Chair, Department of Mechanical & Aerospace Engineering
Eduardo Divo, Department of Mechanical & Aerospace Engineering
Alain Kassab, Department of Mechanical & Aerospace Engineering

Approved for distribution by Ali Gordon, Committee Chair, on April 13, 2017.

The public is welcome to attend.
